

Our team of experts will work with you from start to finish ...

- Network analysis
- Structural planning and design
- Efficiency diagnosis
- Security analysis
- Hardware planning and procurement
- Network installation and setup
- Internet access
- Telephone Line Provisioning
- Cabling
- Desktop setup and configuration
- Personnel training
- Ongoing support
- Warranty management

On an ongoing basis, we'll give you good, solid advice on how to make more of your network. We'll look into what works best for your requirements and proactively plan for the future, to ensure that your network continues to run efficiently as your business grows.

Integration

Great efficiencies are possible by integrating your information systems with each other and, via the internet, allowing your suppliers and customers to manage themselves.

Remote working

Remote working is increasingly popular with businesses today. We can take you through, and show you how you can benefit from remote working and set up your systems so that you can be in touch with your business, wherever you are in the world.

Reliable internet connectivity

As truly independent I.T. support, we'll find an ISP that meets your network needs. Carefully looking at all aspects of internet connectivity from dependability to security, we'll ensure that you have the most comprehensive, yet cost-effective internet solution for your business.

VPNs

We can help your business run a completely secure, private network linked to a single, cost-effective internet connection. Private networks provide more flexibility and enhanced protection from many threats on the internet. You'll also be able to integrate advanced network solutions such as Voice Over IP.

Wireless

Wireless Local Area Networks bring flexibility to modern office spaces and allow many older buildings and non-standard work environments to benefit from all the advantages of networking. This will also allow synergy with your mobile devices, meaning that you can use your technology without having to be restricted to wires and cables.
